

Cypress

Topic Cypress: Public Issue Reporting for Toronto

This app is easy to use and assists users in reporting problems they see on the street and staying updated on their resolution. We must confirm that only genuine people have access in order to guarantee that the system is utilized appropriately.

Depending on the kind of problem, the app helps users find the right organization to contact. Additionally, users may view the comprehensive map, pinpoint the exact location, and report the problem there.

Test Report for Cypress App

This test report describes the fundamental functionality tests for "Cypress," which make sure that important features function as intended. Verifying fundamental software features including navigation, issue reporting, and seeing reported issues on the map is the main goal of these test cases. These tests will assist in verifying that key features work as intended and that users can navigate the app with ease.

The circumstances, test inputs, and results for every functionality are detailed in the test cases that follow:

User Interface Navigation

Test Description: User can navigate between login, signup, main menu, map, and call report screens.

Test Input: A user opens the app and switches between all screens.

Output: screens load without errors.

Status: Passed

Map Display & Tooltip

Test Description: Reported issues appear on the map; hover displays tooltip with details.

Test Input: A user opens the map and hovers over a flag.

Output: Tooltip shows description and status.

Status: Passed

Reporting Functionality (Residents)

Selecting Location

Input: Click on map to choose issue location.

Output: Coordinates are saved, and marker appears.

Status: **Passed**

Selecting Category

Input: Choose issue type (e.g. Pothole).

Output: Type is stored in report.

Status: **Passed**

Writing Description & Submit

Input: Enter text and submit.

Output: Marker is created, report saved to .txt.

Status: **Passed**

Status Viewing (All Users)

Test Input: A user selects a marker.

Output: Status (Unsolved / Under Review / Solved) is shown in tooltip.

Status: **Passed**

Notification System

Test Input: User selects issue and clicks “Subscribe”.

Output: User is added to notification list.

Status: **Not Implemented**

Administrative Functionality (City Officials)

Viewing All Reports

Input: Admin logs in and opens map.

Output: All issues visible with full info.

Status: **Passed**

Updating Issue Status

Input: Click on flag → change status (e.g. Solved).

Output: Status updates, marker disappears if Solved.

Status: **Passed**

Adding Comments

Input: Admin adds explanation for update.

Output: Comment stored and shown in tooltip.

Status: **Passed**

Removing False Reports

Input: Admin selects invalid report and deletes it.

Output: Report is removed from map.

Status: **Not Implemented** (deletion removed as per latest version — solved issues are auto-removed)

Call Reporting System

Test Input: User clicks on map, selects issue type, and clicks “Find Contact”.

Output: App shows valid organization number for the zone + category.

Status: **Passed**

Input Validation

1. Phone Number Format

Input: User types 4165551234

Output: Saved as +1-416-555-1234, error if format invalid

Status: **Passed**

2. Strong Password

Input: Weak password (e.g. test)

Output: Error and hint shown

Status: **Passed**
